

**How many
grams of window
or drinkware
glass is enough
to contaminate
a tonne of
recyclable
glass?**

Just 5 grams of window or drinkware glass is enough to contaminate a tonne of recyclable glass!

Window and drinkware glass melts at a higher temperature than bottle and jar glass. When it gets mixed with recycling it prevents the glass forming properly.

Check out RecyclingNearYou.com.au for more information on kerbside recycling in your council area.
