

**What powerful
greenhouse
gas is
produced
when organic
matter like
garden
cuttings are
thrown into
landfill?**

Methane, a greenhouse gas with over 20 times the global warming capacity of carbon dioxide (CO₂), is produced when organic matter breaks down in landfill.

What can you do?

Reduce the amount of food that you buy and waste.

Use a worm farm, compost bin or bokashi bucket to turn organics into garden fertilizer.

If your council has a green (garden) waste collection get a bin and follow their guidelines for use.

Check green waste collections in your council area on RecyclingNearYou.com.au
