

# How much water do Australians save each year by recycling newspapers?

**Each year,  
approximately 140  
million litres of  
water are saved  
by using recycled  
newsprint rather  
than using raw  
materials.**

**That's approximately  
56 Olympic  
swimming pools!**

**Recycling paper also reduces demand  
for trees as the raw material, and  
uses around 50% less energy.**

**Did you know...?**

**Australia currently leads the world in  
newspaper recycling with more than 75%  
of newsprint recycled.**
