

How much less energy is used by making an aluminium can from recycled material than by making it from raw material?

**95% less
energy is used
when making an
aluminium can
from recycled
material.**

**This represents a
huge reduction in
greenhouse gas
emissions!**

**Australians recycle about 75% of
the aluminium cans we use.**

**Don't forget to bring them back
from the beach or picnic to put in
your kerbside recycling bin!**
